Health Monitoring Report

“Monitored animals from NLAC-MU colony have been maintained in Low barrier facilities, required the excellent status or above well trained personnel and laboratory animal caretakers, under supervision of the qualified veterinarian. In-house health monitoring is quarterly provided by the Quality Control. The microbiological lists are notified in Specific pathogens list and category (available on NLAC-MU website)”

This report is issued to on..... and is applied as health status indication of the following laboratory animals, supplied by the NLAC-MU barrier control facility.

Animal: **Rat** Species: *Rattus norvegicus* Outbred stock: **Mlac:WR**

Ranking of the current status

Superior

Excellent

Good

Remarks:

The results revealed that *Rodentibacter pneumotropicus/heyltii* was isolated (90.00%) with no clinical signs of disease and no other significant organism isolated.

Superior is no positive result in all categories, excellent is no positive result of pathogens in Category A, B, C and E, good is no positive result of pathogens in category A, B and E.

* The test results are represented in the **number of positive Samples/Number of tested samples**

** Optional testing: This method is an optional testing from routine method.

NA= Not Available

ELISA=Enzyme-linked Immunosorbent Assay

IFA= Indirect Fluorescent Antibody

PCR=Polymerase Chain Reaction

Positive results from ELISA technique were confirmed by IFA.
